

**Ensure that you
always carry
an emergency kit
with Solu-Cortef,
syringes and
needles with you.**

**READ HOW
TO GIVE
A SOLU-CORTEF
INJECTION.**

How to inject Solu-Cortef!

This is how it's done.

If you have the opportunity to wash your hands do it first. Mix the contents by firmly pushing down the yellow top of the bottle and shake until the liquid is clear.

Attach the thicker of the two needles onto the syringe. Remove the little round yellow disk from the middle of the yellow top of the bottle and push the needle through the rubber plug in the top of the bottle. Turn the bottle upside down and extract all the liquid into the syringe. Change to the thinner needle. If you don't have the time to change, use the needle you already have.

Wash the injection area with disinfectant if you have some. Squeeze first out the air bubbles in the syringe and then push the needle deep down into the thigh muscle and inject all the liquid. Don't hesitate, it can be a matter of life and death. Call an ambulance!
